# Insurance

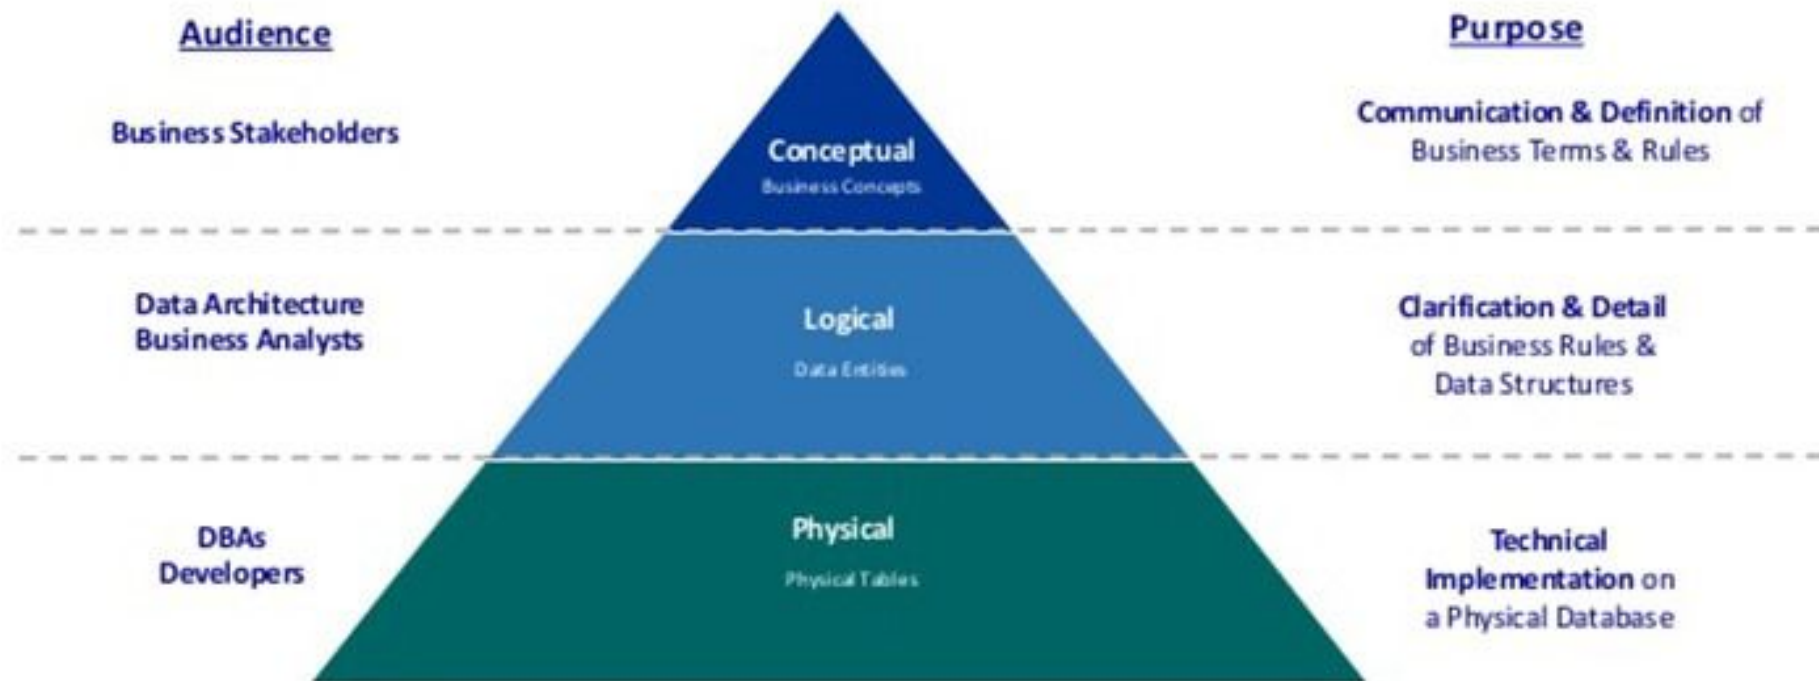

- **Defining Insurance** Insurance in broad terms may be described as a method of sharing financial losses of few from a common fund who are equally exposed to the same loss.
- Insurance is defined as the equitable transfer of the risk of a loss, from one entity to another, in exchange for a premium, and can be thought of a guaranteed small loss to prevent a large, possibly devastating loss. An insurer is a company selling the insurance.
- The insurance rate is a factor used to determine the amount, called the premium, to be charged for a certain amount of insurance coverage.

# Project title

## A Database for a Vehicle Insurance Company

# Levels of Data Modeling

## Part A: Conceptual Data Model

- Varun M Awati(18BCS108)
- Meghana N S(18BCS053)

## PART B: Logical Data Model

- GK Bharath Bhushan(18BCS026)
- Kunchala Chaitanya(18BCS045)
- Sushanth B Patil(18BCS102)

## PART C: PHYSICAL DATA MODEL

- Anuj CS(18BCS009)
- Daneshwari(18BCS022)
- Neha T(18BCS060)
- Rahul S(18BCS075)
- Trishul KS(18BCS104)

# Conceptual Data Model

- Design Rules
- Assumptions
- Entity Types
- Applying Relationships to Entities

# Logical Data Model

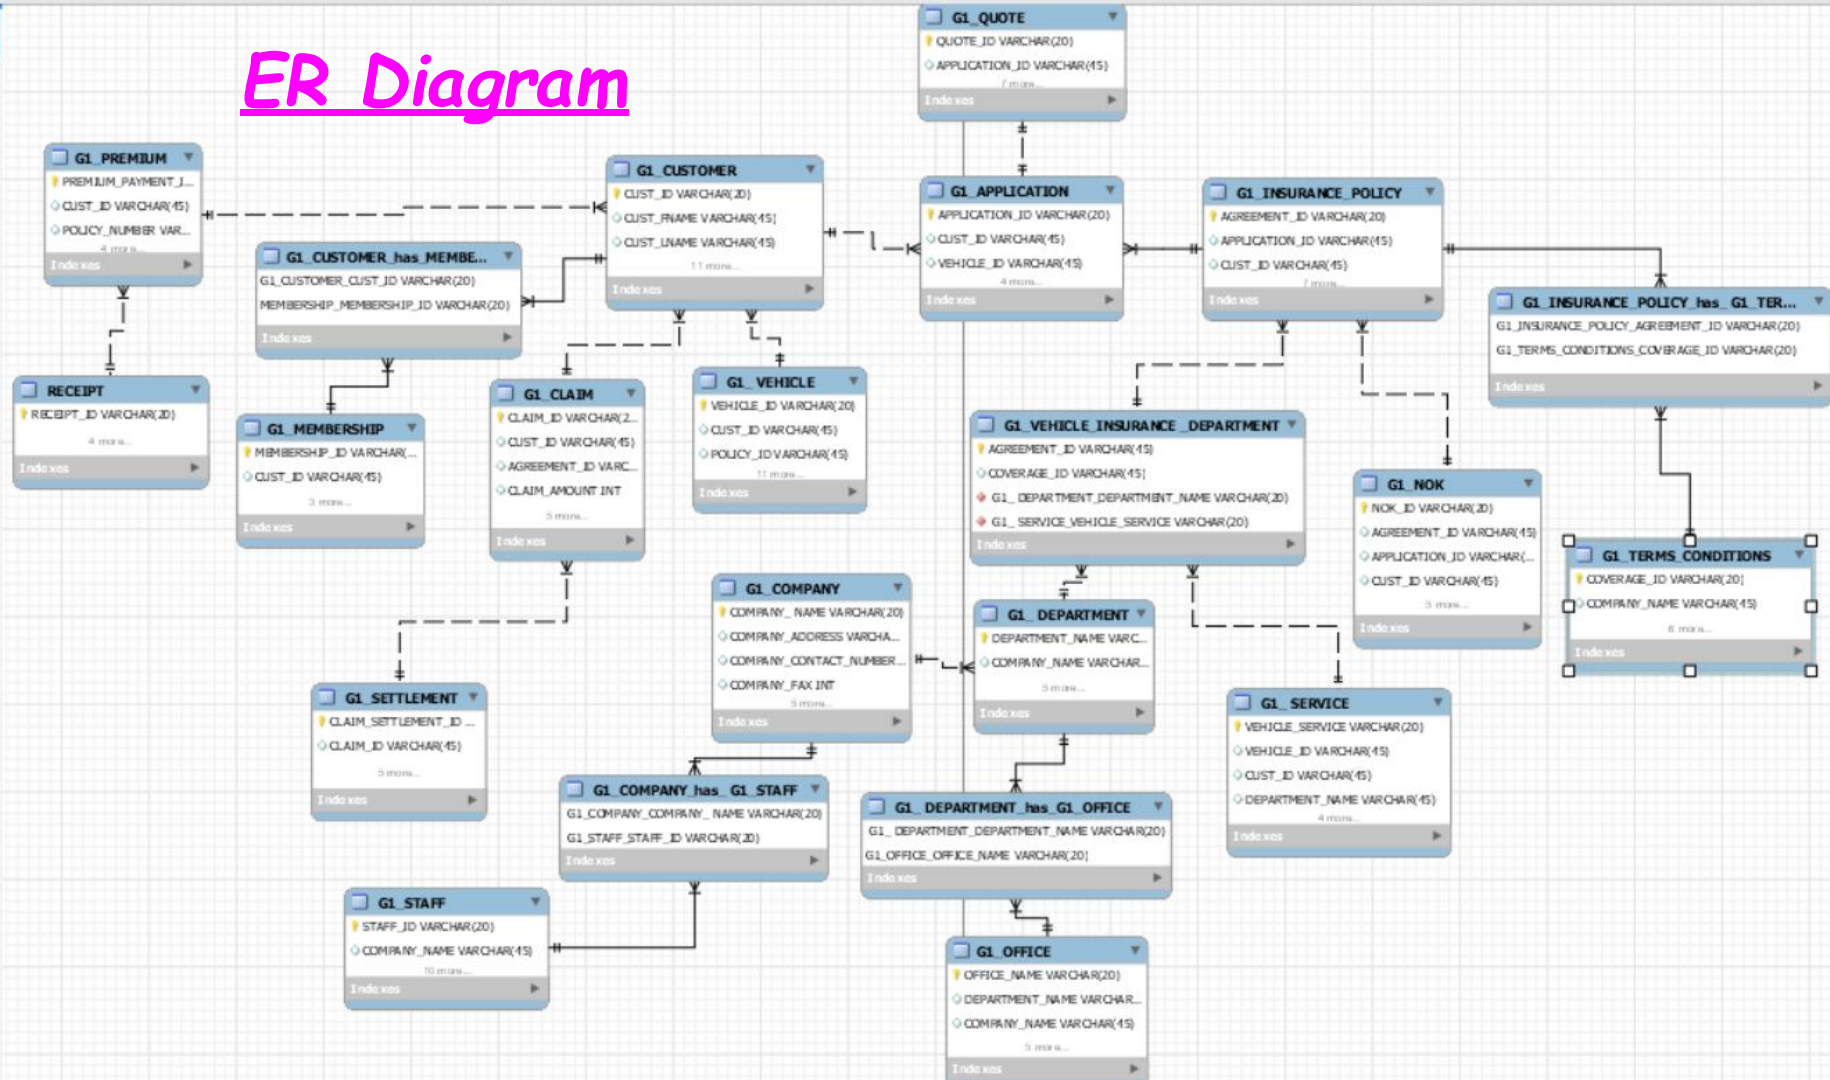

- Improvements to the Conceptual data model.
- Assign the attributes with Primary key and the Foreign Key.
- Assign Data Types
- Tables
- ER Diagram

# Physical Data Model

- Coding
- Entering the values
- Giving Permissions to access
- SQL Queries

# ER Diagram

Thank you!!!
